Evergreen

10 years of my Spotify and Apple Music listening, grown into a living garden

The question: Which music grew up with me and which did I outgrow?

The data: 138,148 plays and 5,796 hours from 2016 to 2026 merged from two platforms

Key concerns: Growing up with music, no single platform sees everything

Jacob Caesar, 24789479

How it works

Data	Visual	Sound
Total hours with an artist	Plant size and branches	Voice weight
Recent listening	Flowers bloom	Voice volume
Loved, then abandoned	Droops, browns, drops petals	Voice fades out
Obsession day	Glow and petal burst with a toast	Rising three note chime
Spotify vs apple ashore	Green and pink timeline	Top songs plays on click

Interaction
Play or scrub the decade, hover a plant to hear it, click for its story and top song

Built with:
ps.js sound, the Spotify embed and API and a Python pipeline that merges both exports

Draft progress and next steps

- **Working:**
- Both exports merged
- 60 plants grow, bloom and wilt
- Timeline play and scrub
- Data-driven soundscape
- Artist panel and top songs
- Obsession day moments

- **Still rough:**
- Platform split on in a chart
- Wilting just sounds like fading
- No key for bloom and wilt
- Full songs need premium

- **By the last submission:**
- “Whos watching?” Lens
- One like key on into screen
- Wilting voices detune
- Cleaner code comments
- Extra features or visual aesthetics
